Description

Description

- Jade is a 37% thixotropic phosphoric, non-slump acid gel for enamel and dentin.
- Jade is for those clinicians who prefer a creamy gel that flows into dentin and enamel, but does not run.
- Jade stays where is placed and does not run onto soft tissue.
- Jade washes off completely and easily and does not stain.
- Jade has a dark blue color that allows high visibility for precise selective placement. It is also available in a lighter green.
- Jade creates micropores in the enamel surface and removes the smear layer to unblock dentinal tubules.
- Gluten-Free
